problema 2 sessione straordinaria 2017/2018 - Melsen Kirolos, 5^G, 16/03/2024

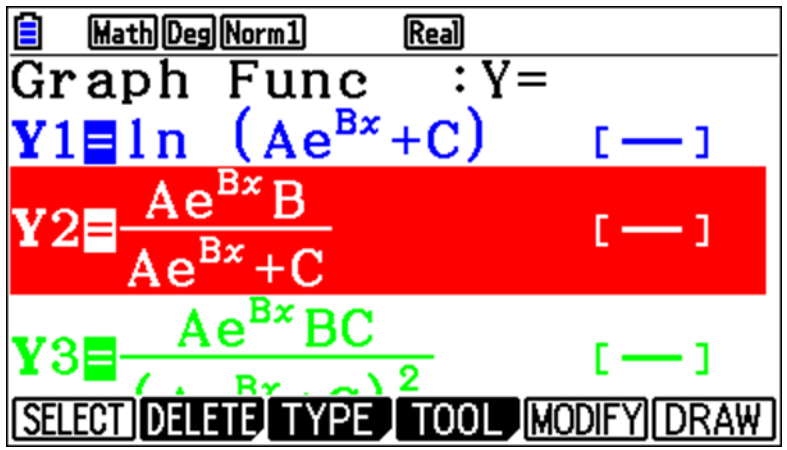

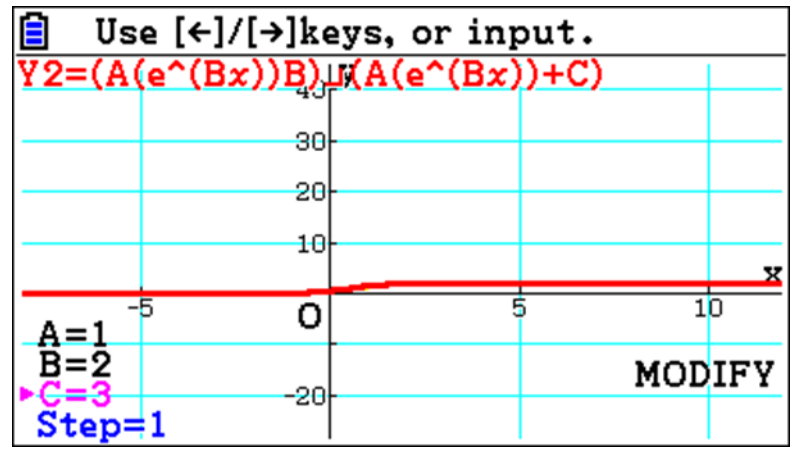

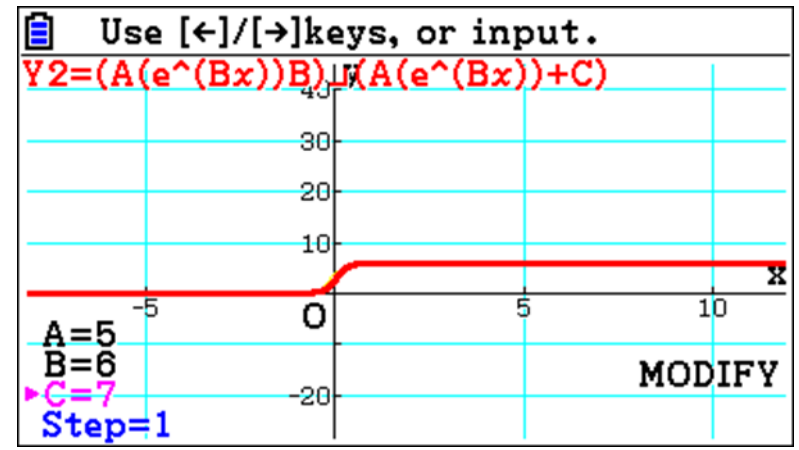

f(x) al variare di a, b, c reali positivi

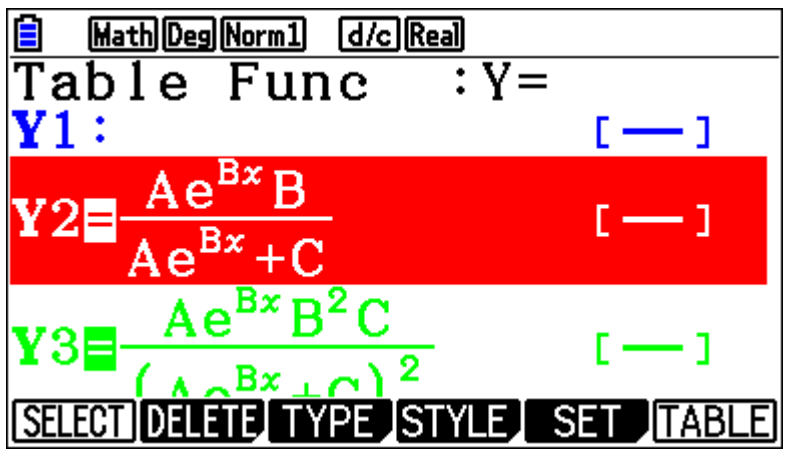

1

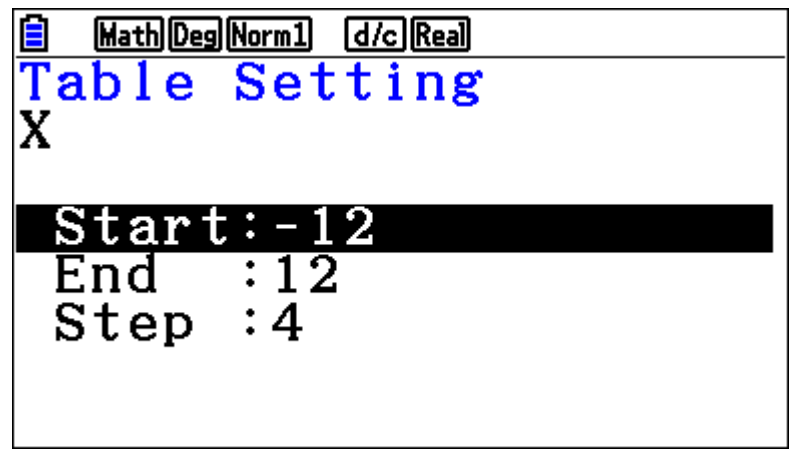

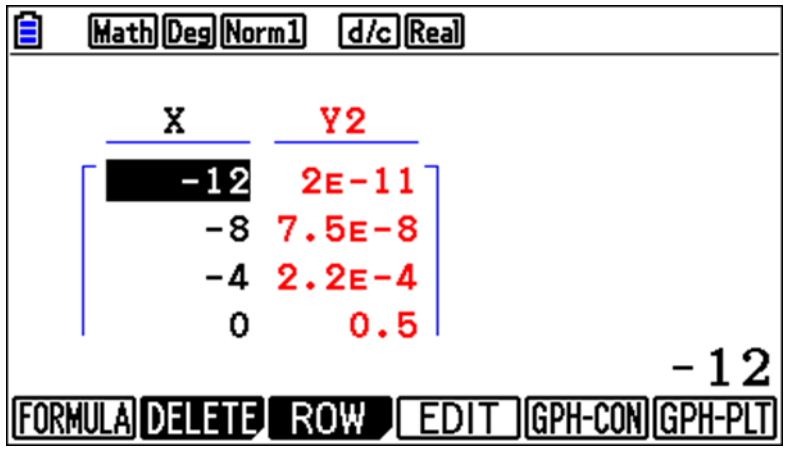

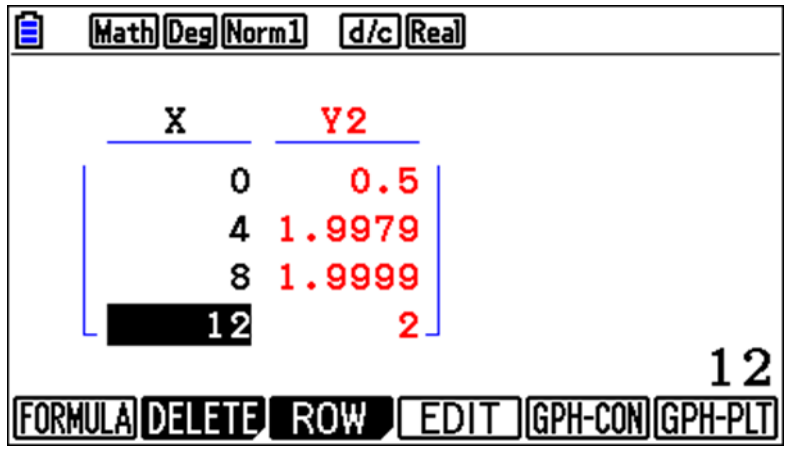

f'(x) al variare di a, b, c reali positivi

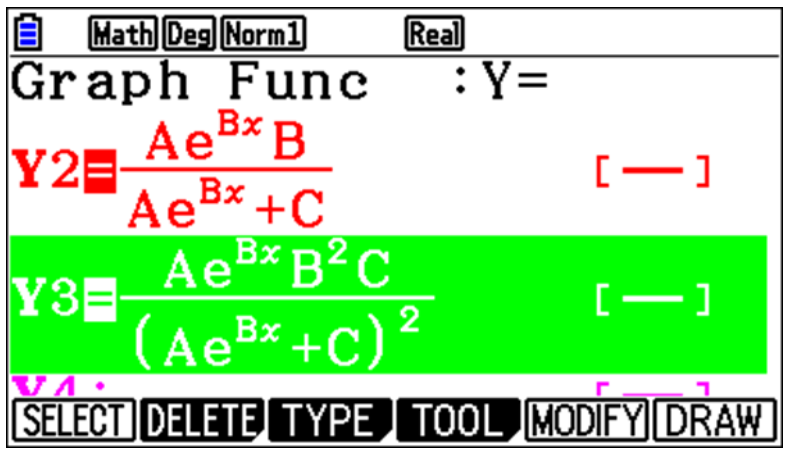

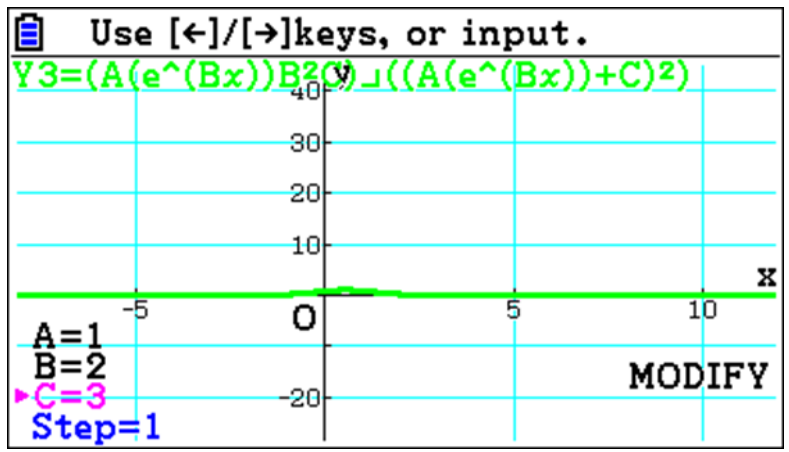

valori di f'(x) con
a = 1
b = 2
c = 3

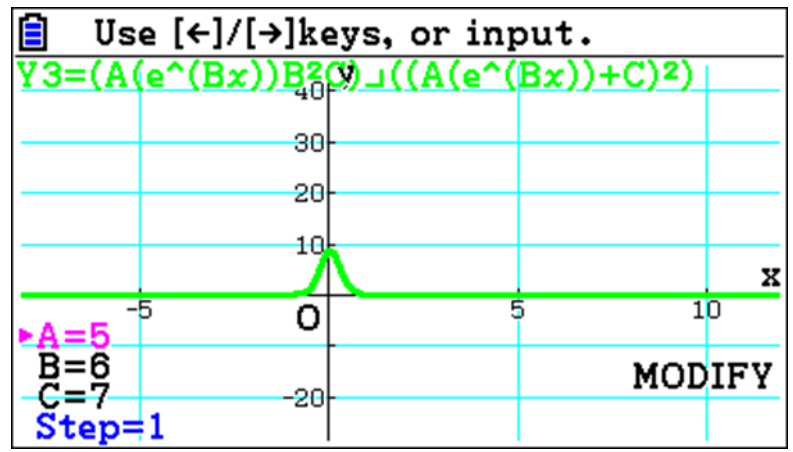

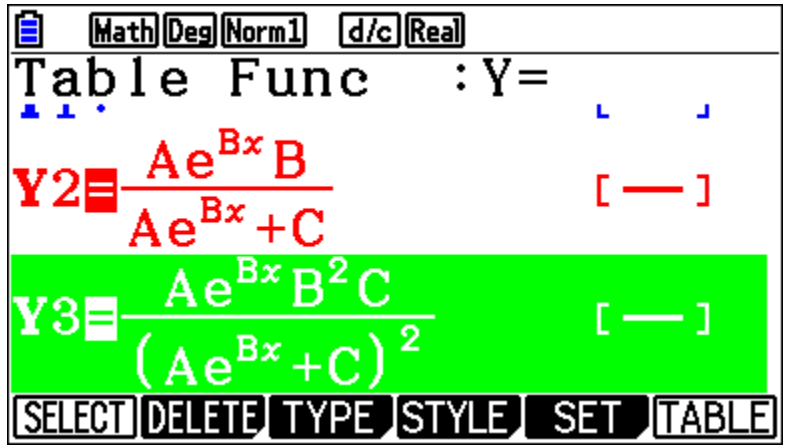

intervallo [-12; +12]
x = k
k multiplo o sottomultiplo di 4

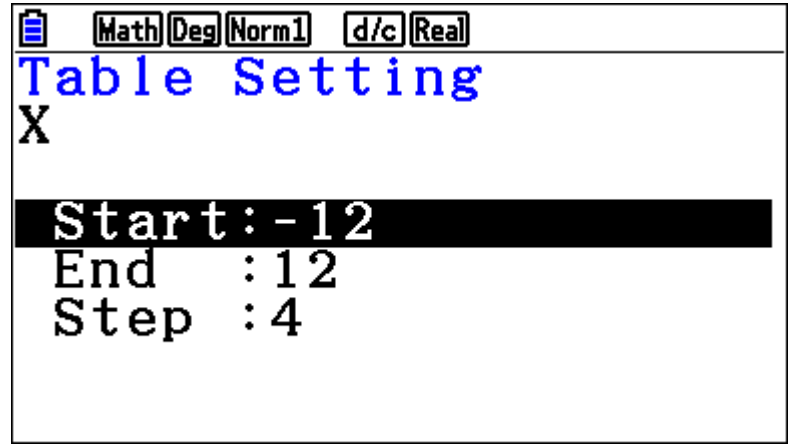

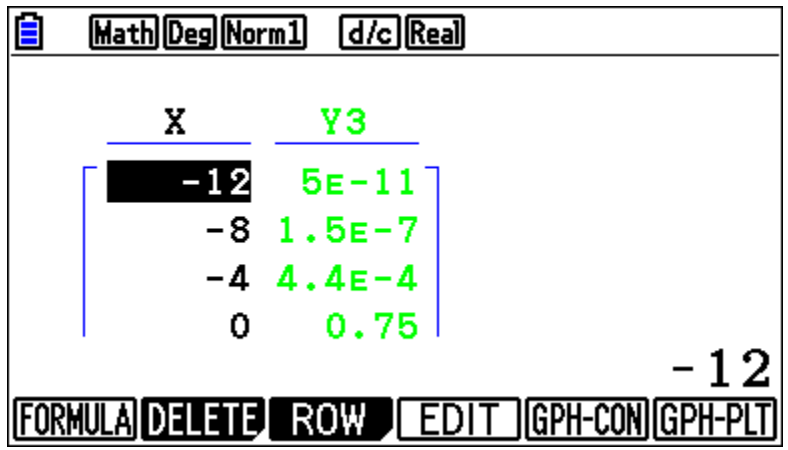

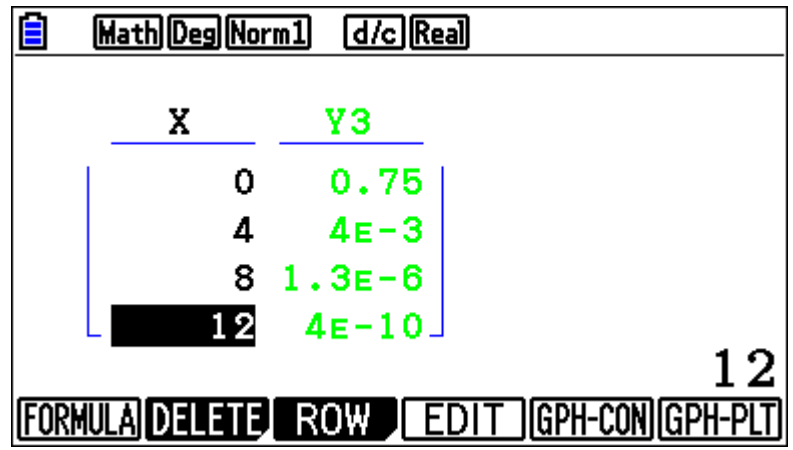

f''(x) al variare di a, b, c reali positivi

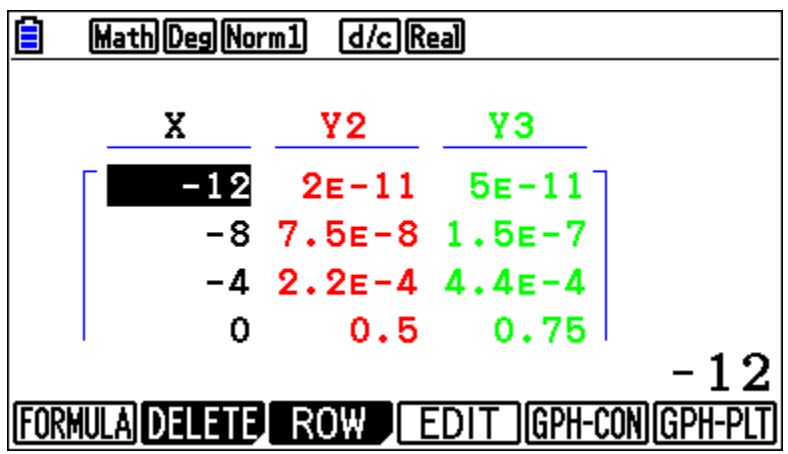

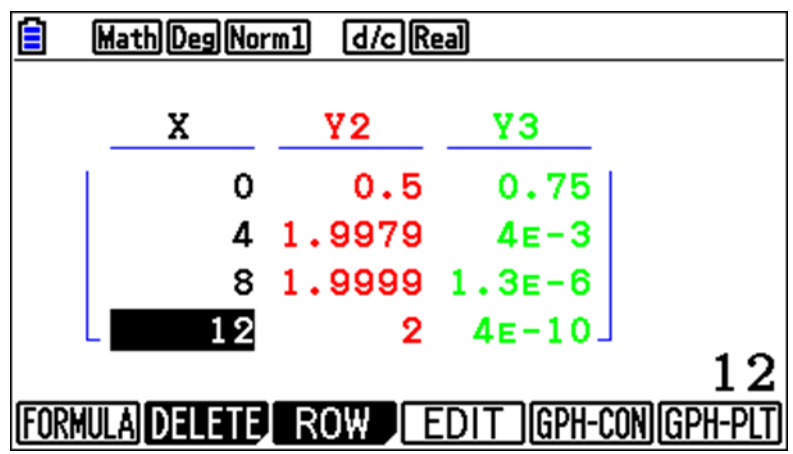

valori di f''(x)
con
a = 1
b = 2
c = 3

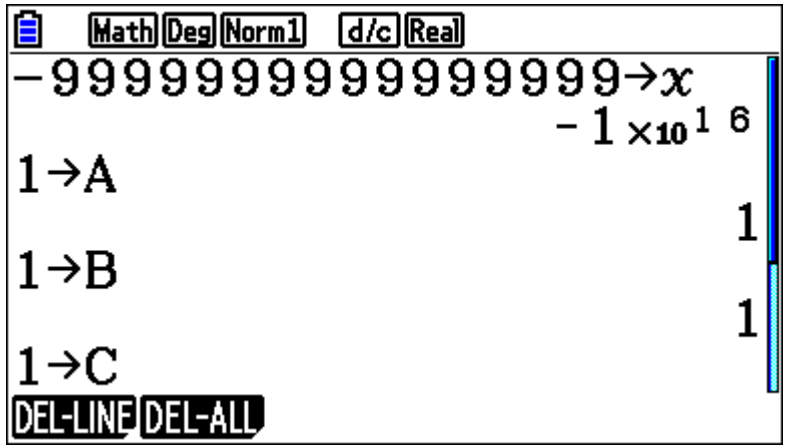

intervallo [-12; +12]
x = k
k multiplo o sottomultiplo di 4

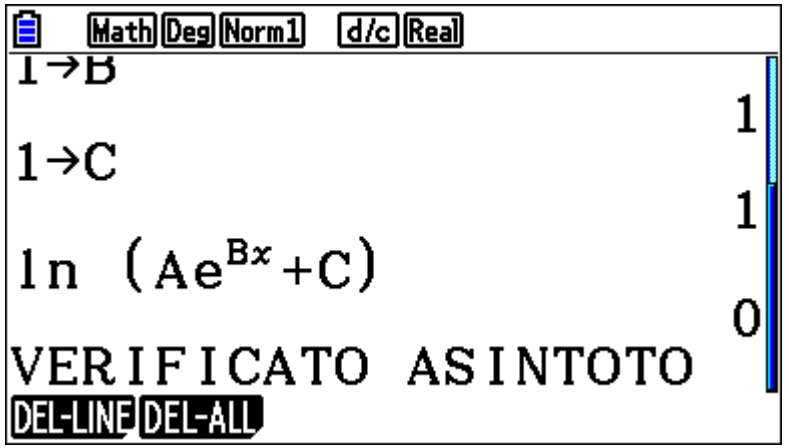

confronto tra f'(x) e f''(x)

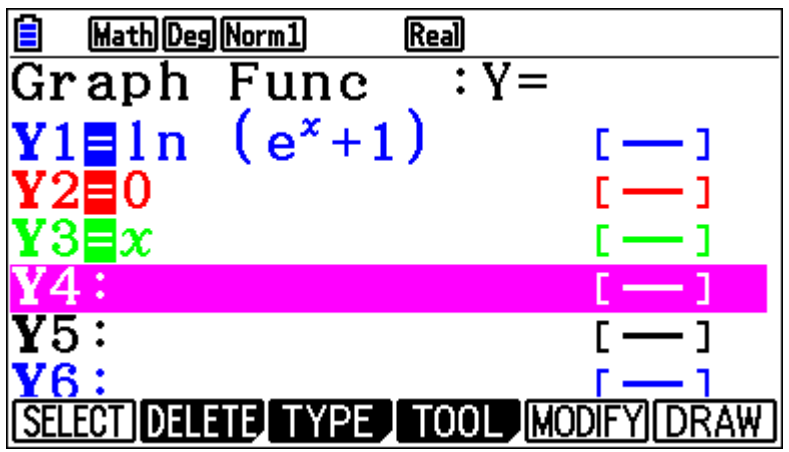

## 2

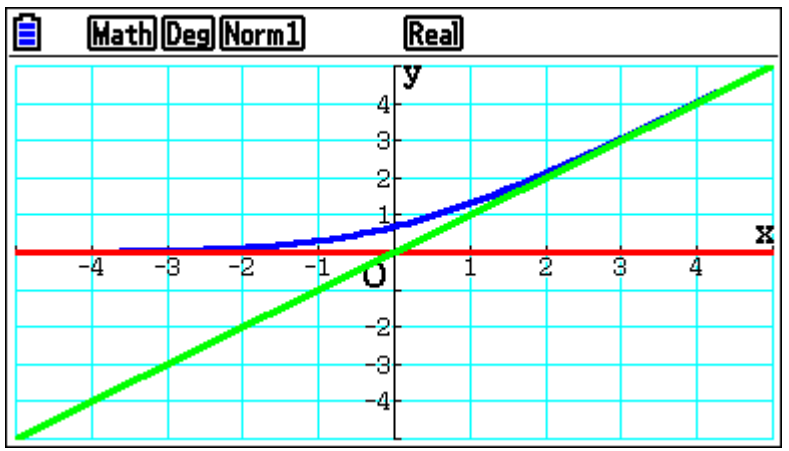

per
a = 1
b = 1
c = 1

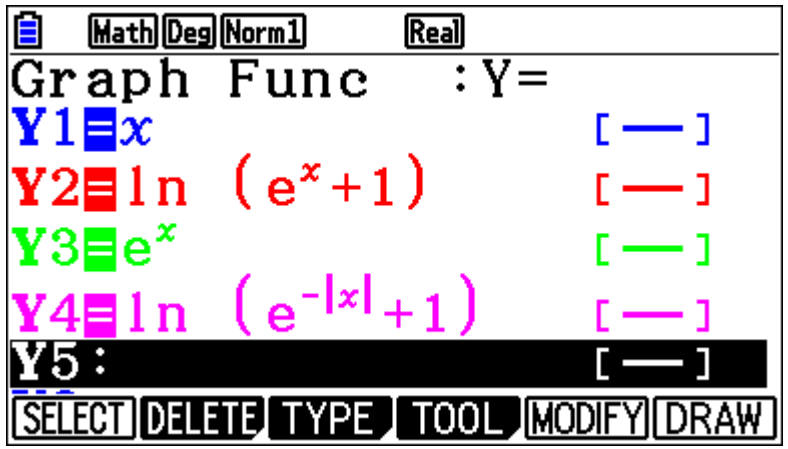

il limite di f(x) per x → -∞
corrisponde al valore zero

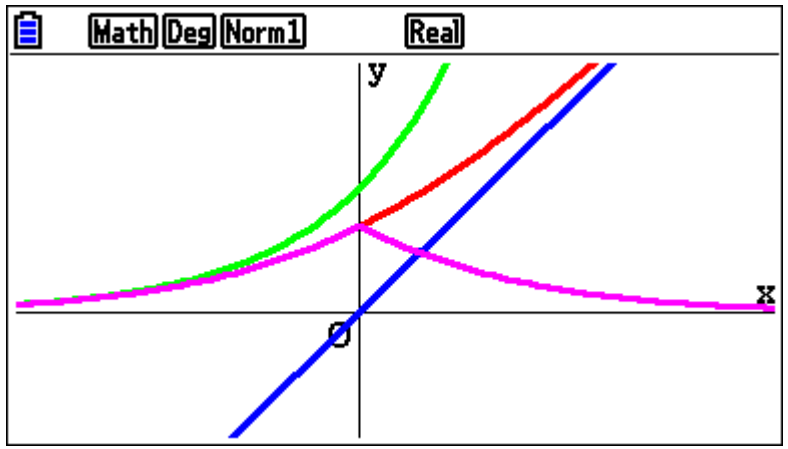

funzione f(x)
asintoto orizzontale
asintoto obliquo

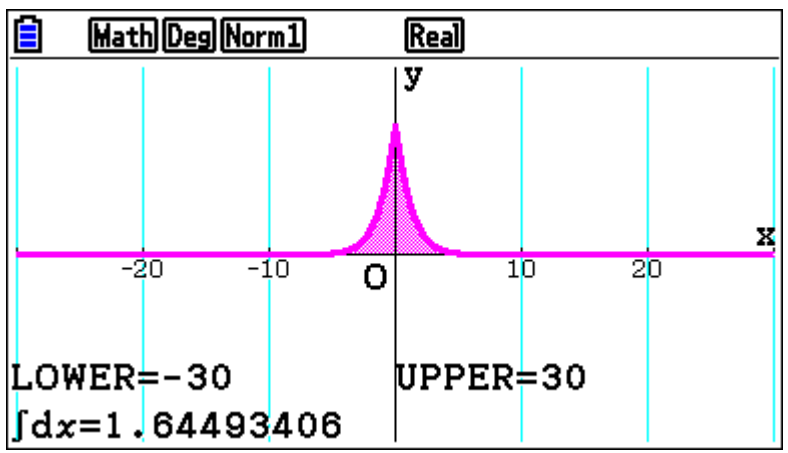

## 3

y = x
y = ln (e^x + 1)
y = e^x
y = ln (e^-|x| + 1)

## 4

h(x) = f(-|x|)
integrale di h(x) con estremi di integrazione -30 e +30
